1. Application

This technical literature applies to the color 80.0" TFT-LCD Module LK800D3LA28.

* This technical literature is proprietary products of SHARP CORPORATION ("SHARP") and includes materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.

* In case of using the device for applications such as control and safety equipment for transportation (aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.

* Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment (trunk lines), nuclear power control equipment and medical or other equipment for life support.

* SHARP assumes no responsibility for any damage resulting from the use of the device that does not comply with the instructions and the precautions specified in these technical literature.

* Contact and consult with a SHARP sales representative for any questions about this device.

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit, power supply circuit, LED driver circuit and back light system etc. Graphics and texts can be displayed on a 1920×RGB×1080 dots panel with one billion colors by using LVDS (Low Voltage Differential Signaling) to interface, +12V of DC supply voltages.

This module includes the DC driver circuit to drive the LED. (+24V of DC supply voltage)

And in order to improve the response time of LCD, this module applies the Over Shoot driving (O/S driving) technology for the control circuit. In the O/S driving technology, signals are being applied to the Liquid Crystal according to a pre-fixed process as an image signal of the present frame when a difference is found between image signal of the previous frame and that of the current frame after comparing them.

With this technology, image signals can be set so that liquid crystal response completes within one frame. As a result, motion blur reduces and clearer display performance can be realized.

This LCD module also adopts Double Frame Rate driving method including FRC (Frame Rate Control) function on the control circuit. Therefore the input signal to this LCD module is Single Frame Rate, but the output is Double-Frame Rate picture. FRC of this module is a game (PC) mode setup.

With combination of these technologies, motion blur can be reduced and clearer display performance can be realized.

3. Mechanical Specifications

Parameter	Specifications	Unit
Display size	203.218 (Diagonal) 80.0 (Diagonal)	cm inch
Active area	1771.200 (H) x 996,300 (V)	mm
Pixel Format	1920 (H) x 1080 (V) (1pixel = R + G + B dot)	pixel
Pixel pitch	0.9225 (H) x 0.9225 (V)	mm
Pixel configuration	R, G, B vertical stripe	
Display mode	Normally black	
Open Cell Outline Dimensions	1820.2(H) x 1045.3(V) x 14.2(D)	mm
Mass	(37.5)	kg
Surface treatment	Low-Haze Anti glare Hard coating: 2H and more	

(*1) Outline dimensions are shown in p.20 (excluding protruding portion)

4.4 The back light system characteristics

The characteristics of the LED are shown in the following table. The value mentioned below is at the case of One LED.

Item	Symbol	Min.	Typ.	Max.	Unit	Remarks
Life time	T _{LED}	-	T.B.D.	-	Hour	25°C [Note.1]

[Note1] LED life time is the expectation value calculated from lifetime data of maker report. It is defined as the time when brightness becomes 50% of the original value in the continuous operation under the condition of Ta=25°C.

It is assumed that LED current becomes 70% when the LED dimming duty ratio is 70% and calculates.

5. Absolute Maximum Ratings

Parameter	Symbol	Condition	Ratings	Unit	Remark
Input voltage (for C-PWB)	V _I	Ta=25°C	-0.3 ~ 3.6	V	[Note 1]
12V supply voltage (for C-PWB)	V _{CC}	Ta=25°C	0 ~ + 14	V	
Input voltage (for LED Driver)	V _{on/off} DIM_SEL EX_DIM	Ta=25 °C	-0.3 ~ 3.9	V	
24V supply voltage (for LED Driver)	V _{LED}	Ta=25 °C	0 ~ + 24	V	
Storage temperature	T _{stg}	-	-25 ~ +60	°C	[Note 2]
Operation temperature (Ambient)	T _{opa}	-	0 ~ +50	°C	

[Note 1] SELLVDS、OS set、FRAME

[Note 2] Humidity 95%RH Max.(Ta≤40°C)

Maximum wet-bulb temperature at 39 °C or less.(Ta>40°C)

No condensation.

6. Electrical Characteristics

6.1. Control circuit driving

Ta=25 °C

Parameter		Symbol	Min.	Typ.	Max.	Unit	Remark

		I _{IL2}			(400)	μA	V _I = 0V [Note 5]
Input leak current (High)		I _{IH1}	-	-	(400)	μA	V _I = 3.3V [Note 4]
		I _{IH2}	-	-	(40)	μA	V _I = 3.3V [Note 5]
Terminal resistor		R _T	-	100	-	Ω	Differential input
Input Differential voltage		VID	200	400	600	mV	[Note 6]
Differential input common mode voltage		V _{CM}	VID /2	1.2	2.4- VID /2	V	[Note 6]

[Note]V_{CM}: Common mode voltage of LVDS driver.

[Note1]

Input voltage sequences

T.B.D. < t₁ < T.B.D.T.B.D. < t₂ < T.B.D.T.B.D. < t₃ < T.B.D.0 < t₄ < 1s0 < t₅ < 1s(1sec) < t₆₋₁(1sec) < t₆₋₂0 < t₇₋₁0 < t₇₋₂1s < t₈

Dip conditions for supply voltage

a) V₂ ≤ V_{CC} < V₁t_d < 10msb) V_{CC} < V₂

This case is based on input voltage sequences.

※ Data1: ACK±, AIN0±, AIN1±, AIN2±, AIN3±, AIN4±, BCK±, BIN0±, BIN1±, BIN2±, BIN3±, BIN4±,

*V_{CM} voltage pursues the sequence mentioned above

※ Data2: SELLVDS, O/S set, FRAME

[Note] About the relation between data input and back light lighting, please base on the above-mentioned input sequence. When back light is switched on before panel operation or after a panel operation stop, it may not display normally. But this phenomenon is not based on change of an incoming signal, and does not give damage to a liquid crystal display.

[Note 2] Typical current situation: 1024 gray-bar patterns. ($V_{CC} = +12.0V$)

The explanation of RGB gray scale is seen in section 8.

[Note] V_{LED} -turn-on condition

2) V_{LED} -turn-off condition

7. Timing characteristics of input signals

7.1. Timing characteristics

Timing diagrams of input signal are shown in Fig.2.

Parameter		Symbol	Min.	Typ.	Max.	Unit	Remark
Clock	Frequency	1/Tc	(67)	74.25	(76)	MHz	
Data enable signal	Horizontal period	TH	(1050)	1100	(1300)	clock	
			(14.2)	14.8	(16.1)	μs	
	Horizontal period (High)	THd	960	960	960	clock	
	Vertical period	TV	1109	1125	1400	line	
			(47)	60	(61)	Hz	
	Vertical period (High)	TVd	1080	1080	1080	line	

[Note]-When vertical period is very long, flicker and etc. may occur.

-Please turn off the module after it shows the black screen.

-Please make sure that length of vertical period should become of an integral multiple of horizontal length of period. Otherwise, the screen may not display properly.

-As for your final setting of driving timing, we will conduct operation check test at our side, please inform your final setting.

- 0: Low level voltage / 1: High level voltage
- Each basic color can be displayed in 1021 gray scales from 10 bits data signals. According to the combination of total 30 bits data signals, one billion-color display can be achieved on the screen.

9. Optical characteristics

$T_a=25^{\circ}\text{C}$, $V_{cc}=12\text{V}$, $V_{LED}=+24\text{V}$, Brightness 100%, Timing: 60Hz (typ. value)

Parameter		Symbol	Condition	Min.	Typ.	Max.	Unit	Remark
Viewing angle range	Horizontal	θ_{21} θ_{22}	$CR \geq 10$	70	88	-	Deg.	[Note1,4]
	Vertical	θ_{11} θ_{12}		70	88	-	Deg.	
Contrast ratio		CRn	$\theta=0^{\circ}$ deg.	4000	5000	-	-	[Note2,4]
Response time		τ_{rd}		-	4	-	ms	[Note3,4,5]
Chromaticity	White	x		Typ.-0.03	(0.282)	Typ.+0.03	-	[Note4]
		y		Typ.-0.03	(0.288)	Typ.+0.03	-	
	Red	x		Typ.-0.03	(0.637)	Typ.+0.03	-	
		y		Typ.-0.03	(0.348)	Typ.+0.03	-	
	Green	x		Typ.-0.03	(0.297)	Typ.+0.03	-	
		y		Typ.-0.03	(0.623)	Typ.+0.03	-	
	Blue	x		Typ.-0.03	(0.149)	Typ.+0.03	-	
		y		Typ.-0.03	(0.063)	Typ.+0.03	-	
Luminance	White	Y_L		(300)	(350)	-	cd/m ²	
Luminance uniformity	White	δw		-	-	(1.43)		[Note6]

- Measurement condition: Set the value of backlight control voltage to maximum luminance of white.
- The measurement shall be executed 60 minutes after lighting at rating.

[Note] The optical characteristics are measured using the following equipment.

Measurement of viewing angle range and Response time.

- Viewing angle range: EZ-CONTRAST
- Response time: Photodiode

Measurement of Contrast, Luminance, Chromaticity.

[Note1] Definitions of viewing angle range:

[Note2] Definition of contrast ratio:

The contrast ratio is defined as the following.

$$\text{Contrast Ratio} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

[Note3] Definition of response time

The response time (τ_{rd}) is defined as the following.

$$\tau_{rd} = \{\sum (tr : x - y) + \sum (td : x - y)\} / 20$$

τ_{rd} is the average value of the switching time from five gray levels (0%, 25%, 50%, 75% and 100%) to five gray levels (0%, 25%, 50%, 75% and 100%).

		Gray level of End (y)				
		0%	25%	50%	75%	100%
Gray level of Start (x)	0%		tr: 0%-25%	tr: 0%-50%	tr: 0%-75%	tr: 0%-100%
	25%	td: 25%-0%		tr: 25%-50%	tr: 25%-75%	tr: 25%-100%
	50%	td: 50%-0%	td: 50%-25%		tr: 50%-75%	tr: 50%-100%
	75%	td: 75%-0%	td: 75%-25%	td: 75%-50%		tr: 75%-100%
	100%	td: 100%-0%	td: 100%-25%	td: 100%-50%	td: 100%-75%	

[Note4] This value shall be measured at center of the screen.

[Note5] This value is valid when O/S driving is used at typical input time value.

[Note6] Definition of white uniformity ;

White uniformity is defined as the following with five measurements. (A~E)

$$\delta_w = \frac{\text{Maximum luminance of five points (brightness)}}{\text{Minimum luminance of five points (brightness)}}$$

10. Reliability test item

No.	Test item	Condition
1	High temperature storage test	Ta=60°C 240h
2	Low temperature storage test	Ta=-25°C 240h
3	High temperature and high humidity operation test	Ta=40°C ; 95%RH 240h (No condensation)
4	High temperature operation test	Ta=50°C 240h
5	Low temperature operation test	Ta=0°C 240h
6	Vibration test (non-operation)	Frequency: 10~57Hz/Vibration width (one side): 0.075mm : 58~500Hz/Acceleration: 9.8 m/s ² Sweep time: 11 minutes Test period: 3 hours (1h for each direction of X, Y, Z)
7	ESD	* At the following conditions, it is a thing without incorrect operation and destruction. (1)Non-operation: Contact electric discharge ±10kV Non-contact electric discharge ±20kV (2)Operation Contact electric discharge ±8kV Non-contact electric discharge ±15kV Conditions: 150pF, 330ohm

[Result evaluation criteria]

Under the display quality test condition with normal operation state, there shall be no change, which may affect practical display function.

11. Packing form

- a) Piling number of cartons : T.B.D
- b) Packing quantity in one carton : T.B.D
- c) Carton size : T.B.D
- d) Total mass of one carton filled with full modules : T.B.D

12. Carton storage condition

Temperature	0°C to 40°C
Humidity	95% RH or less
Reference condition	20°C to 35°C, 85% RH or less (summer) 5°C to 15°C, 85% RH or less (winter) the total storage time (40°C, 95% RH) : 240h or less
Sunlight	Be sure to shelter a production from the direct sunlight.
Atmosphere	Harmful gas, such as acid and alkali which bites electronic components and/or wires must not be detected.
Notes	Be sure to put cartons on palette or base, don't put it on floor, and store them with removing from wall. Please take care of ventilation in storehouse and around cartons, and control changing temperature is within limits of natural environment.
Storage life	1 year.

13. Label

13.1 Module Serial Label

a) Overview

This label is stuck on the backlight chassis.

b) How to express Lot No.

Model No.	1	2	3	4
LK800D3LA28	(03)	T.B.D	(00001)	T.B.D
				Suffix Code
				Serial No.
				Factory Code
				- T.B.D
				-
				Production Year & Month

13.2. Packing Label

This label is stuck on the each packing box.

ex) LK800D3LA28

社内品番 : (4S) LK800D3LA28*

Barcode (①)

LotNO. : (1T) 2011. *. **

Barcode (②)

Quantity : (Q) * pcs

Barcode (③)

ユーザ品番 :

シャープ物流用ラベルです。

- ① Model No.& Suffix Code
- ② Lot No.
- ③ Quantity

14. Precautions

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.
- b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- c) Since the front polarizer is easily damaged, pay attention not to scratch it.
- d) Since long contact with water may cause discoloration or spots, wipe off water drop immediately.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- g) Since CMOS LSI is used in this module, take care of static electricity and take the human earth into consideration when handling.
- h) The module has some printed circuit boards (PCBs) on the back side, take care to keep them from any stress or pressure when handling or installing the module; otherwise some of electronic parts on the PCBs may be damaged.
- i) Observe all other precautionary requirements in handling components.
- j) When some pressure is added onto the module from rear side constantly, it causes display non-uniformity issue, functional defect, etc. So, please avoid such design.
- k) When giving a touch to the panel at power on supply, it may cause some kinds of degradation. In that case, once turn off the power supply, and turn on after several seconds again, and that is disappear.
- l) When handling LCD module and assembling them into cabinets, please be noted that long-term storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the LCD modules.
- m) This LCD module is designed to prevent dust from entering into it. However, there would be a possibility to have a bad effect on display performance in case of having dust inside of LCD module. Therefore, please ensure to design your TV set to keep dust away around LCD module.
- n) This LCD module passes over the rust.
- o) Adjusting Vcom has been set optimally before shipment, so do not change any adjusted value. If adjusted value is changed, the specification may not be satisfied.
- p) Disassembling the module can cause permanent damage and should be strictly avoided.
- q) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- r) The chemical compound, which causes the destruction of ozone layer, is not being used.
- s) In any case, please do not resolve this LCD module.
- t) This module is corresponded to RoHS.
- u) When any question or issue occurs, it shall be solved by mutual discussion.

LD-K23X51-20
